Seminar and Research

1. What is research in one sentence?

It is a systematic investigation, study, and analysis of information or phenomena to expand knowledge, validate existing theories, or solve practical problems.

2. What makes the topic researchable?

A research topic becomes researchable when it fulfills several key criteria that enable a feasible and meaningful investigation. Here are the primary aspects that contribute to making a research topic researchable:

1. **Specificity:** The research topic should be clearly defined and focused, avoiding overly broad or vague subject matter. A narrow and well-defined topic enhances the feasibility of conducting a thorough investigation within a set scope.

2. **Importance:** A researchable topic should address a gap in knowledge, solve a practical problem, or contribute to existing literature, demonstrating its relevance and importance within a particular field or discipline.

3. **Availability of Data:** The topic should be supported by accessible data sources, literature, or empirical material that can be used to conduct the research, thereby ensuring that the investigation is feasible and practical.

4. **Manageable Scope:** The research question should be realistically achievable within the constraints of time, resources, and the researcher's abilities. It should be neither overly ambitious nor excessively restricted, ensuring a realistic investigation.

5. **Empirical Testability:** A researchable topic should allow for empirical testing or investigation through established research methods, fostering the potential for clear and systematic inquiry.

6. **Originality:** While not all research topics need to be entirely novel, they should strive to contribute new perspectives, insights, or interpretations to the existing body of knowledge, adding value to the field.

7. **Ethical Integrity:** Ensuring that the research topic aligns with ethical standards and guidelines is crucial. It should not raise ethical concerns or potential harm to individuals or

communities involved in or affected by the research.

CONCLUSION

In summary, a researchable topic is one that is specific, relevant, feasible, and ethical, allowing for a systematic and empirically supported investigation with the potential to contribute to knowledge and understanding within a particular domain.

Selecting a research topic that satisfies these criteria is a vital step in the research process, as it sets the foundation for the quality and impact of the ensuing investigation.
